

REIflywheel

Replit Build Handoff — Complete Instruction Guide

Stack: GitHub · Replit · Supabase · Resend | May 26, 2026

HOW TO USE THIS DOCUMENT

This document is the complete instruction set for building the REIflywheel launch features. Replit reads the codebase first, then follows this guide step by step. **Do not skip steps. Do not begin a phase until the previous phase's verification gate passes.**

Step 3	Read the codebase. Produce the current state map per product.
Step 4	Read the desired outcome. Repeat it back. Confirm before proceeding.
Step 5	Run the gap analysis. Label every item FIX / BUILD / UPDATE / VERIFY.
Step 6	Extract all FIX items. Resolve bugs before writing new code.
Step 7	Map dependencies. Nothing moves forward until its dependency is done.
Step 8	Build the chronological roadmap. Phases ordered by dependency.
Step 9	Present roadmap. Wait for human confirmation before executing.
Step 10	Execute one step at a time. One phase at a time. Gate must pass before next phase.

STEP 3 — CURRENT STATE MAP (Replit reads codebase)

Pull the full codebase from GitHub. For each product below, map exactly what exists, what is broken, and what is missing. Be specific — name files and line numbers for bugs. **Do not proceed to Step 4 until this map is complete and confirmed by the human.**

REI Flywheel — Wholesaler deal sharing and disposition tool.

VERIFY	EXISTS — working features	List every working feature with the file it lives in.
FIX	EXISTS — broken/buggy	Name the exact file and line number. Describe the bug.
BUILD	MISSING — not built	Features that need to be created from scratch.

CHG Rehab Platform — House flipper rehab project management.

VERIFY	EXISTS — working features	List every working feature with the file it lives in.
FIX	EXISTS — broken/buggy	Name the exact file and line number. Describe the bug.

BUILD	MISSING — not built	Features that need to be created from scratch.
--------------	----------------------------	--

Contractor Portal — Contractor jobs, bids, invoices, compliance.

VERIFY	EXISTS — working features	List every working feature with the file it lives in.
FIX	EXISTS — broken/buggy	Name the exact file and line number. Describe the bug.
BUILD	MISSING — not built	Features that need to be created from scratch.

Investor Portal — Investor deal visibility and capital deployment.

VERIFY	EXISTS — working features	List every working feature with the file it lives in.
FIX	EXISTS — broken/buggy	Name the exact file and line number. Describe the bug.
BUILD	MISSING — not built	Features that need to be created from scratch.

Server / Shared Backend — Supabase schema, auth, API routes, shared services.

VERIFY	EXISTS — working features	List every working feature with the file it lives in.
FIX	EXISTS — broken/buggy	Name the exact file and line number. Describe the bug.
BUILD	MISSING — not built	Features that need to be created from scratch.

STEP 4 — DESIRED OUTCOME

The desired outcome is to ship all features defined in the three roadmap PDFs below, on top of the existing MVP. After reading this section, Replit must repeat back every point in its own words and ask: *"Is this exactly right? Did I miss anything?"* Do not move to Step 5 until the human confirms.

NOTIFICATION INFRASTRUCTURE

Build a full notification system using two layers: (1) Resend for email notifications, (2) Supabase real-time for in-app notifications. Push notifications are deferred — do not build them now. No email service or notification infrastructure currently exists in the codebase.

STICKINESS SYSTEM — 13 features across 4 modules

Module 1 — External Triggers (fires when user is NOT in the app)

BUILD	Buyer viewed your deal	Email + in-app notification fires the moment a buyer opens any deal on the wholesaler's public profile. Include buyer name, deal address, timestamp. Highest open-rate trigger.
BUILD	New buyer joined your list	Fires when someone clicks 'Join buyer list' on their profile. Include buyer name, email, buyer type. Makes the wholesaler feel the platform is working for them when offline.

BUILD	Offer received on deal	Fires immediately when a buyer submits an offer. Include offer amount, deal address, deep link to offer screen. High urgency — drives instant return to app.
BUILD	Contract deadline alert	48hr and 24hr warnings before any contract date, inspection deadline, or earnest money due date. Highest practical value notification on the platform.

Module 2 — Internal Triggers (what users see when they log in)

BUILD	Animated activity counter	First thing visible on dashboard — 'Your profile had 14 views this week ↑ 3 from last week.' Number animates on load with week-over-week delta.
BUILD	Action inbox	'3 things need your attention' — unreviewed offers, uncontacted leads, deals with no activity in 7+ days. Gives every visit a clear starting point.
BUILD	New deals in your market feed	Dashboard feed showing deals recently posted in the wholesaler's market. Keeps platform feeling active every visit. Uses same geography filters as market alert system.
BUILD	Profile completion score	'Your profile is 60% complete — add a bio and 2 more deals to unlock Verified status.' Progress bar toward Founding Member badge at 100%.

Module 3 — Habit Loop (scheduled touchpoints, weekly rhythm)

BUILD	Monday morning digest	Every Monday 8am local time: profile views, new buyers, deal activity, one actionable tip. Subject line includes real numbers: '3 buyers viewed your deals this week.' Sent even if activity is low.
BUILD	Deal activity streak	'You've posted or updated a deal 3 weeks in a row' — visible on dashboard. Streak resets if no deal action in 7 days. Light gamification.
BUILD	Marketplace pulse alert	'2 new deals posted in your market this week' — weekly alert showing platform growth in their area. Creates FOMO if inactive. Medium priority — Sprint 3.

Module 4 — Market Alert System (geography-based deal alerts)

BUILD	Buyer market alerts	Buyers set filters: city/state/zip + property type + price range + strategy (flip/rental/BRRRR). Email + in-app fires within minutes of a matching deal posted. Always fires regardless of JV toggle.
BUILD	Wholesaler JV alerts	Wholesalers set same geography filters but ONLY get notified when newly posted deal has JV toggle ON. Prevents competitive intelligence leaks. JV toggle becomes a distribution switch.

GTM STEP 3 — COMPOUND THE LOOP (4 mechanics)

Mechanic 1 — Viral Deal Sharing

BUILD	REIflywheel watermark on every memo	Every Investment Memo carries a subtle 'Built on REIflywheel' watermark and link. Must ship at launch.
BUILD	Deal Debut card	When a wholesaler posts their first deal, platform auto-generates a shareable announcement card: 'I just listed my first deal on REIflywheel.' Designed to post on social or blast to buyer list. Must ship at launch.

VERIFY	Public profile CTA	'Join @handle on REIflywheel' CTA already exists on public profile. Verify it is live and working.
--------	--------------------	--

Mechanic 2 — Referral Incentive System

BUILD	Referral tracker on dashboard	'You've referred 2 of 3 users needed for your Founding Member badge.' Progress bar visible every login. Must ship at launch.
BUILD	Referral tier structure	4 tiers: 1 referral = +30 days free Team plan. 3 referrals = Founding Member badge. 5 referrals = Verified badge + leaderboard. 10 referrals = 3 months free Team + Ambassador status. Referral counts only when referred user posts their first deal — not at signup.
BUILD	Founding Member badge	Permanent badge awarded at 3 active referrals. Cannot be earned after first 1,000 users.

Mechanic 3 — Ambassador Program

BUILD	Ambassador auto-trigger	Auto-triggered when user hits: 10+ referrals, 5+ active deals posted, 60+ days on platform. No manual selection — platform identifies and upgrades automatically.
BUILD	Ambassador perks	Permanent Ambassador badge. Top placement in marketplace search. Early access to new features. Private feedback channel with founding team. Platform perks only — no cash.
BUILD	Public leaderboard	'Top Wholesalers on REIflywheel' ranked by deals closed, buyer list size, referrals. Publicly visible to buyers. Goes live when 20+ active users exist.
BUILD	Co-branded content with ambassadors	Feature ambassadors in platform-produced content. Week 4+ feature.

Mechanic 4 — Co-Brand Content Sharing Module

BUILD	Deal highlight cards	Auto-generated visual card for any active deal — photo, asking price, ARV, strategy, assignment fee. Pulls from deal record. REIflywheel profile link always embedded. All users get access. Ambassadors get premium layouts.
BUILD	Market stats posts	Auto-generates 'Market snapshot' post — avg ARV, avg assignment fee, deal volume, days on market. All users. Ambassadors get deeper data cuts. Week 2–3 activation.
BUILD	Educational wholesaling tips	Pre-written platform-branded content user can share as their own. All users. Ambassadors get exclusive tips first.
BUILD	Personal milestone posts	Auto-triggered at milestones: first deal posted, first deal closed, buyer list hit 50/100/500, 10 JV connections. Platform generates shareable celebration card. Must ship at launch. Ambassadors get animated versions.
BUILD	Social sharing integration	One-click share to: Facebook, Instagram, LinkedIn, TikTok, X/Twitter + copy shareable link. Week 2–3 activation.

STEP 5 — GAP ANALYSIS

Compare the current state map (Step 3) against the desired outcome (Step 4). Label every item using the four tags below. Do not skip any desired outcome item.

[FIX]	Exists but broken. Must be repaired before any new features are built.
[BUILD]	Does not exist. Must be created from scratch.
[UPDATE]	Exists and works but needs modification to support desired outcome.
[VERIFY]	Exists and appears to work. Needs confirmation only.

STEP 6 — BUGS FIRST

Extract every [FIX] item from Step 5 into a separate list. These are bugs that exist RIGHT NOW in the live product. **These must be resolved before any new features are built.** Building new features on broken foundations creates compounding bugs. State clearly at the top of this list: *'These bugs must be fixed before we build anything new.'*

STEP 7 — DEPENDENCY MAP

For every [BUILD] and [UPDATE] item, answer these three questions:

What must exist FIRST?	List every prerequisite. Nothing starts until its dependency is done.
What does this block?	What cannot be built until this item is complete?
What does it touch?	Server change, database change, or frontend change?

Hard rules — never violate:

Rule 1	Server/backend changes always come before frontend changes.
Rule 2	Auth/identity changes always come before feature changes.
Rule 3	Bug fixes always come before new features.
Rule 4	Notification infrastructure (Resend + Supabase real-time) must be built before any notification-dependent feature.
Rule 5	Supabase schema changes must be deployed before any code that reads or writes those tables.

Draw the full dependency chain. Every item must show its position in that chain before it appears in the roadmap.

STEP 8 — CHRONOLOGICAL ROADMAP

Organize all items into phases ordered strictly by dependency. Each phase ends with a verification gate. The gate must pass before the next phase begins.

Phase 0 — Audit & Stabilize

All [FIX] items go here. All [VERIFY] items go here. No new code is written until Phase 0 passes its gate.

VERIFICATION GATE — all must pass before next phase begins:

- All [FIX] bugs resolved and tested
- All [VERIFY] items confirmed working
- Supabase connection confirmed stable
- GitHub repo synced with Replit
- No console errors on any existing page

If any fail — stop, fix, re-verify before continuing.

Phase 1 — Notification Infrastructure

Build the notification foundation before any feature that depends on it. Nothing in Phases 2–5 can be built until this phase passes.

BUILD	Supabase notifications table	Schema: id, user_id, type, title, body, metadata (JSONB), read (bool), created_at. Enable real-time on this table.
BUILD	Resend integration	Install Resend SDK. Store API key in environment variables. Create a reusable <code>sendEmail(to, subject, html)</code> utility function. Test with a single transactional email before wiring to any feature.
BUILD	In-app notification bell	Bell icon in nav with unread badge count. Dropdown shows last 10 notifications with mark-as-read. Powered by Supabase real-time subscription — updates without page refresh.
BUILD	Notification service layer	Server-side service with functions: <code>createNotification()</code> , <code>sendEmailNotification()</code> , <code>markAsRead()</code> , <code>getUnreadCount()</code> . All notification-creating features call this service.

VERIFICATION GATE — all must pass before next phase begins:

- Supabase notifications table created and real-time enabled
- Resend sends a test email successfully
- In-app bell shows unread count and updates in real-time
- Mark-as-read works
- No errors in Supabase logs or Replit console

If any fail — stop, fix, re-verify before continuing.

Phase 2 — Supabase Schema Extensions

All new tables and schema changes must be deployed before any frontend code that reads them.

BUILD	referrals table	Schema: id, referrer_id, referred_user_id, status (pending/activated), created_at, activated_at. Status = activated only when referred user posts their first deal.
--------------	------------------------	---

BUILD	badges table	Schema: id, user_id, badge_type (founding_member/verified/ambassador), awarded_at, metadata (JSONB).
BUILD	user_stats table	Schema: user_id, profile_views_this_week, profile_views_last_week, deals_posted, buyer_list_count, streak_weeks, last_deal_action_at, completion_score (int 0–100).
BUILD	market_alerts table	Schema: id, user_id, alert_type (buyer/wholesaler_jv), geography (city/state/zip), property_types (array), price_min, price_max, strategy (array), active (bool).
BUILD	milestones table	Schema: id, user_id, milestone_type, achieved_at, card_generated (bool), card_shared (bool).
BUILD	content_shares table	Schema: id, user_id, content_type (deal_card/market_stats/tip/milestone), deal_id (nullable), platform, shared_at.

VERIFICATION GATE — all must pass before next phase begins:

- All new tables created in Supabase
- RLS policies set on all new tables
- No migration errors in Supabase dashboard
- Existing features still work (no schema conflicts)

If any fail — stop, fix, re-verify before continuing.

Phase 3 — External Triggers (Module 1)

Wire the four must-ship notification triggers. Depends on Phase 1 (notification infrastructure) and Phase 2 (schema).

BUILD	Buyer viewed your deal	Log view event when buyer opens a deal on public profile. Trigger createNotification() + sendEmailNotification() to deal owner. Debounce: only fire once per buyer per deal per 24hr window.
BUILD	New buyer joined your list	Trigger on 'Join buyer list' click. Fire notification immediately to wholesaler.
BUILD	Offer received on deal	Trigger when buyer submits offer. Include deep link to offer screen in notification.
BUILD	Contract deadline alert	Cron job checks for contract dates 48hr and 24hr out. Send email + in-app for each. Use Supabase scheduled functions or Replit cron.

VERIFICATION GATE — all must pass before next phase begins:

- Viewing a deal on public profile triggers an in-app notification to the wholesaler
- Email notification arrives in inbox within 60 seconds of trigger
- Joining buyer list fires notification
- Submitting offer fires notification with correct deal link
- Contract deadline cron fires at correct times
- No duplicate notifications

If any fail — stop, fix, re-verify before continuing.

Phase 4 — Internal Triggers & Dashboard Rebuild (Module 2)

BUILD	Animated activity counter	Query user_stats for this_week vs last_week profile views. Animate the number on load using CSS/JS counter animation. Show delta with up/down arrow.
BUILD	Action inbox	Query for: unreviewed offers, uncontacted leads (no notes, no status update), deals with no activity in 7+ days. Display as '3 things need your attention' card. Each item is a deep link to the relevant module.
BUILD	New deals in your market feed	Show deals posted in the last 7 days in the wholesaler's geography. Use state from user profile as default geography. Link each card to the deal.
BUILD	Profile completion score	Calculate score from: profile photo (20%), bio (20%), 1+ deal posted (20%), 2+ deals posted (20%), handle set (20%). Display as progress bar. Show what action unlocks the next 20%.

VERIFICATION GATE — all must pass before next phase begins:

- Activity counter animates correctly on dashboard load
- Action inbox shows correct count and links
- Market feed shows real deals from correct geography
- Profile completion score calculates and displays correctly
- All dashboard elements load without errors

If any fail — stop, fix, re-verify before continuing.

Phase 5 — Habit Loop (Module 3)

BUILD	Monday morning digest	Cron job every Monday 8am (user local time). Compile: profile views, new buyers, deal activity, one tip. Send via Resend. Subject includes real numbers. Fires even if no activity.
BUILD	Deal activity streak	Track last_deal_action_at in user_stats. Increment streak_weeks every Monday if user had deal activity in past 7 days. Reset to 0 if no activity. Show streak on dashboard with fire emoji at 3+ weeks.
BUILD	Marketplace pulse alert	Weekly email: count of new deals in user's market that week. Medium priority — build last in this phase.

VERIFICATION GATE — all must pass before next phase begins:

- Monday digest cron fires correctly (test with manual trigger first)
- Streak increments correctly after deal action
- Streak resets correctly after 7 days of no action
- Streak visible on dashboard
- Marketplace pulse email sends weekly

If any fail — stop, fix, re-verify before continuing.

Phase 6 — Market Alert System (Module 4)

BUILD	Alert preferences UI	Settings page where buyers set: geography (city/state/zip), property types, price range, strategy. Wholesalers set geography + JV-only toggle. Saves to market_alerts table.
BUILD	Alert matching engine	On every new deal posted: query market_alerts for matching user preferences. For buyers: match geography + type + price + strategy. For wholesalers: match geography AND deal must have JV toggle ON. Fire notification + email to all matched users within 5 minutes.

VERIFICATION GATE — all must pass before next phase begins:

- Buyer can set and save alert preferences
- Wholesaler can set JV alert preferences
- Posting a deal triggers alerts to matching users within 5 minutes
- JV toggle correctly gates wholesaler alerts
- No alerts fire for non-matching deals

If any fail — stop, fix, re-verify before continuing.

Phase 7 — Viral Deal Sharing (GTM Mechanic 1)

BUILD	REIflywheel watermark on Investment Memo	Add 'Built on REIflywheel' text + logo watermark to Investment Memo output. Subtle placement — footer of memo page. Include link to doorine.com. Must ship at launch.
BUILD	Deal Debut card	Detect first deal posted by user (check deals count = 1). Auto-generate shareable card: 'I just listed my first deal on REIflywheel @handle.' Show modal with preview + share buttons (Facebook, Instagram, LinkedIn, copy link). Must ship at launch.
VERIFY	Public profile CTA verification	Confirm 'Join @handle on REIflywheel' CTA is live and functional on public profile page.

VERIFICATION GATE — all must pass before next phase begins:

- Watermark appears on all Investment Memo outputs
- Deal Debut card modal fires on first deal post
- Share buttons work (copy link at minimum)
- Public profile CTA confirmed working

If any fail — stop, fix, re-verify before continuing.

Phase 8 — Referral System (GTM Mechanic 2)

BUILD	Referral link generation	Each user gets a unique referral URL: doorine.com/join?ref=handle. Show on dashboard with copy button.
BUILD	Referral tracking logic	On signup via referral link: create referrals record with status=pending. On referred user's first deal post: update status=activated, trigger badge check.
BUILD	Referral tracker UI	'You've referred 2 of 3 users needed for your Founding Member badge.' Progress bar on dashboard. Updates in real-time via Supabase.

BUILD	Tier unlock logic	1 activated referral: +30 days Team plan. 3 activated: Founding Member badge awarded, write to badges table. 5 activated: Verified badge + leaderboard placement. 10 activated: 3 months Team + Ambassador status flag set.
BUILD	Founding Member badge display	Show badge on profile and public profile. Permanent — cannot be removed.

VERIFICATION GATE — all must pass before next phase begins:

- Referral link generates correctly per user
- Signing up via referral link creates referrals record
- Referring user's tracker updates when referred user posts first deal
- Founding Member badge awarded at 3 activated referrals
- Verified badge awarded at 5 activated referrals
- Badge displays on profile and public profile

If any fail — stop, fix, re-verify before continuing.

Phase 9 — Ambassador Program (GTM Mechanic 3)

BUILD	Ambassador auto-trigger	Cron or event-based check: if user has 10+ activated referrals AND 5+ active deals AND account age 60+ days → set ambassador flag, award Ambassador badge, send notification.
BUILD	Public leaderboard	Page: /leaderboard. Ranked by: deals closed + buyer list size + referrals (weighted). Goes live when platform has 20+ active users. Show top 10. Publicly visible to buyers browsing marketplace.
BUILD	Ambassador marketplace boost	Ambassador profiles rank higher in marketplace search results. Implement as a sort weight multiplier in marketplace query.

VERIFICATION GATE — all must pass before next phase begins:

- Ambassador auto-trigger fires correctly at threshold
- Ambassador badge appears on profile
- Leaderboard page loads and ranks correctly
- Ambassador profiles rank higher in marketplace search

If any fail — stop, fix, re-verify before continuing.

Phase 10 — Co-Brand Content Sharing Module (GTM Mechanic 4)

BUILD	Deal highlight card generator	Button on each deal: 'Share this deal.' Generates a visual card with property photo, asking price, ARV, strategy, assignment fee, REIflywheel profile link. Ambassadors get premium layouts (different template). Week 2–3.
BUILD	Personal milestone posts	Auto-generate shareable card at milestones: first deal posted, first deal closed, buyer list hits 50/100/500, 10 JV connections. Show modal with card preview + share buttons. Must ship at launch. Ambassadors get animated versions.

BUILD	Market stats post generator	Button in dashboard: 'Share your market stats.' Auto-generates snapshot of user's active markets. Ambassadors get deeper data. Week 2–3.
BUILD	Educational tips module	Library of pre-written REIflywheel-branded tips. User can co-brand with their handle and share. All users access standard tips. Ambassadors get exclusive tips first.
BUILD	Social sharing integration	Share buttons for: Facebook, Instagram, LinkedIn, TikTok, X/Twitter, copy link. Use Web Share API where supported. Fallback to copy link. Log shares to content_shares table.

VERIFICATION GATE — all must pass before next phase begins:

- Deal highlight card generates from deal data
- Milestone card fires on first deal post
- Share buttons work on at least 3 platforms + copy link
- Shares logged to content_shares table
- Ambassador premium layouts display for ambassador users

If any fail — stop, fix, re-verify before continuing.

STEP 9 — CONFIRM ROADMAP WITH HUMAN

After completing Steps 3–8, present the full roadmap to the human. Ask: *'Does this order make sense? Is anything missing or out of order?'* **Do not start executing until the human explicitly says 'let's start Phase 0' or equivalent.**

STEP 10 — EXECUTE ONE STEP AT A TIME

When the human approves and says to begin, follow these rules without exception:

One phase at a time	Work on one phase. Do not begin Phase N+1 until Phase N gate passes.
One instruction at a time	Give one copy-paste-ready Replit prompt per message. Wait for output before continuing.
Gate before advancing	Run through the verification gate checklist together after all steps in a phase are done.
Name files explicitly	Every instruction names the exact file being created or modified.
Server before frontend	Never give a frontend instruction that depends on a server change that hasn't shipped yet.
Report errors immediately	If Replit returns an error, stop and fix before continuing to the next step.

QUICK REFERENCE — STACK & SERVICES

Frontend	Existing framework in GitHub repo (React or Next.js)
Backend/DB	Supabase — database, auth, storage, real-time, scheduled functions
Hosting	Replit
Email	Resend — install SDK, store API key in env vars
Push	NOT in scope for launch — defer
In-app notifs	Supabase real-time subscriptions on notifications table
Billing	OUT OF SCOPE — do not touch billing or pricing
Do not change	Any existing routes, components, or sidebar structure unless explicitly specified

End of handoff guide. Replit begins at Step 3. Human confirms at Steps 3, 4, 9 before proceeding.
